

## High-Risk COVID-19 Outpatients May Avoid Hospitalization with Monoclonal Antibody Treatment

### Eligibility

Outpatients may be eligible for treatment with monoclonal antibodies if they are an adult or pediatric (age 12 years and older and  $\geq 40$  kg) outpatient, have experienced the onset of mild to moderate symptoms of COVID-19 in the last 10 days, have tested positive for COVID-19, and have one or more of the following high-risk factors:

- Age  $\geq 65$  years of age
- Obesity or being overweight based on CDC clinical growth charts
- Pregnancy
- Chronic kidney disease
- Diabetes
- Immunosuppressive disease or immunosuppressive treatment
- Cardiovascular disease or hypertension
- Chronic lung diseases
- Sickle cell disease
- Neurodevelopmental disorders
- Having a medical-related technological dependence (for example: tracheostomy, gastrostomy, or positive pressure ventilation not related to COVID-19)

In addition to outpatient treatments, on June 24, 2021, the FDA granted an EUA for a recombinant humanized monoclonal antibody (tocilizumab) for certain hospitalized COVID-19 patients.

### Early Action Is Vital

Early testing, identification, and referral **within 10 days of symptom onset** are vital to access monoclonal antibody treatment.

For more treatment information contact your primary care provider.
